

Marian Temprana Alonso

📍 Miami, FL ✉ mtemp009@fiu.edu ☎ (305)575-9300 🔗 mtalonso.github.io in marian-temprana-alonso

Education

- PhD** **Florida International University**, Computer Science Aug 2022 – Present
Advisor: Farhad Shirani
An Information-Theoretic Framework for Energy-Efficient Communication, Compression, and Inference
- MSc** **Florida International University**, Computer Science Aug 2022 - May 2025
- BSc** **Florida International University**, Applied Mathematics Aug 2019 - May 2022

Work & Research Experience

Sandia National Laboratories Albuquerque, NM/Miami, FL
Graduate Research Intern May 2023 - May 2025

- **Resilient Power Grid Analytics for Large Contingencies** [T1][T2]

Collaboration with Los Alamos National Laboratory

- Applied data mining and advanced analytics to post-process high-contingency power grid simulations.
- Identified patterns in cascading events towards resilience planning.
- Developed a regression-based predictive framework to assess topology changes and mitigate the impact of High-Altitude Electromagnetic Pulses (HEMPs) on the grid.

Florida International University

Miami, FL

Graduate Research Assistant

Aug 2022 - Present

- **Temporal Knowledge Graphs for Accident Prediction in Autonomous Vehicles**

Collaboration with National Yang Ming Chiao Tung University, Indian Institute of Technology at Kanpur

- Developed a comprehensive pipeline combining YOLO-based object detection for labeling with MiDas depth perception, overlaying depth heatmaps on traffic scene frames captured from multiple camera angles.
- Leveraged a Large Language Model (LLM) to perform semantic analysis on processed images, generating propositional logic statements that describe traffic scenarios and encode them as a temporal knowledge graph.
- Integrated the temporal knowledge graph into a Graph Neural Network (GNN) framework, enabling accident probability prediction for autonomous vehicles.

- **Reinforcement Learning-Based Optimization for Quantization** [C4]

- Designed a Reinforcement Learning (RL) framework to approximate the optimal quantization configuration.
- Implemented and extended the CORTICAL algorithm for mutual information approximation and maximization in a discrete scenario with pre-determined quantization points.
- Performed extensive simulations to validate the framework in real-world applications, including wireless communications and task-based quantization.

- **Deep Learning-Driven Multi-Modal Sensor Fusion for CSI Compression** [C3][J2]

Collaboration with National Yang Ming Chiao Tung University, Indian Institute of Technology at Kanpur, Arizona State University

- Proposed a system model for Channel State Information (CSI) estimation incorporating multi-modal side information (MSI) at the base station.
- Conducted comprehensive evaluations of CSI estimation accuracy under varying MSI modalities and compression rates, leveraging state-of-the-art neural networks.

- **Task-Based Quantization with Nonlinear Analog Processing** [C2]

Collaboration with Weizmann Institute of Technology, University of Melbourne

- Investigated a task-based quantization paradigm where the objective task differs from the observed measurements.
- Explored the use of nonlinear analog processing to minimize distortion, achieving enhanced rate-distortion performance.

- **Energy-Efficient Wireless Communication Using Low-Resolution ADCs** [J1]

Collaboration with University of California, Irvine

- Analyzed MIMO communication rates under low-resolution Analog-to-Digital Converters (ADCs) for energy-efficient wireless systems.
- Justified the incorporation of nonlinear operators through theoretical analysis and numerical evaluations, highlighting the gains in rate performance and energy efficiency under varying system configurations.

- **Consensus Based Sensor Fusion** [C1]

- Showed the existence of a tradeoff between the accuracy and consensus objectives in distributed estimation.
- Decomposed the fusion function into orthonormal basis components for the Hilbert space of functions of variables.
- Formulated an optimization problem for the optimal fusion algorithms.

Florida International University

Graduate Teaching Assistant

Miami, FL

Aug 2022 - Apr 2023

- Course: COT 3510: Applied Linear Structures for Computing
- Course: COT 3100: Discrete Structures

Skills

Languages: English (bilingual), Spanish (native)

Programming: Python (advanced), Matlab (proficient), Pytorch (advanced), Tensorflow (proficient)

Selected Honors & Awards

ISIT 2023 DeepVerse 6G Machine Learning Challenge Winning Team	2023
GAAN Fellowship	2023
Grace Hopper Celebration Scholar	2023
Student Academic Achievement & Service Award	2022
